The Surg-e®-Doc™ offers the following advantages:

**Extra Monopolar port**
The Surg-e®-Doc™ offers the ability to utilize an extra monopolar port. This added versatility eliminates the need to change monopolar electrodes within the same handpiece during a procedure.

**Simultaneous activation of Surg-e®-Vac™**
The Surg-e®-Doc™ extends the life of the vacuum unit by automatically activating the Surg-e®-Vac™ only when the RF energy source is activated. Moreover, the Surg-e®-Vac™ will continue vacuuming for 5 seconds after the RF energy source is deactivated. This allows for automatic removal of residual plume.

**Less Clutter**
The Surg-e®-Doc™ eliminates the need for separate footswitch activation of Surg-e®-Vac™. This reduces clutter since the only footswitch needed is that of the RF energy source.

Scalpel Electrodes are commonly used for incisions and excision of tissue. The blade shape provides broader coagulation than a needle electrode.

Empire® MicroTip Needles are tapered and have a pinpoint design which produces micro-smooth cutting and coagulation while creating less tissue alteration.

Insulated Needle Electrodes are used for the treatment of Telangiectasia and for epilation.

ACe-Tip™ Advanced Composition Alloy

ACe-Tip™ Technology
Advantages:
• Minimal adherence of tissue
• Low absorption
• Tissue preservation

The ellman® ACe-Tip™ electrodes are designed to reduce resistance/impedance which causes less undesired lateral heat compared to tungsten steel electrodes.

A 45% reduction in the zone of hyalinization has been demonstrated.†

ACe-Tip™ electrodes glide smoothly through tissues and are excellent for sculpting and tissue shaping.
